BF-325

Analog Two-way Radio

Notice to the user

Government law prohibits the operation of unlicensed radio transmitters within the territories under government control.

Illegal operation is punishable by fine or imprisonment or both.

THANK YOU

We are grateful you choose BelFone series professional radio communications products!

Since 1989, BelFone has been dedicated to research and explore in the field of radio communication technology throughout the decades, and has developed leading smart technology in the industry. Underpinned by research, development and design geared towards modern complicated and changeable communication environment, it is capable of tailoring specific communication solutions to your needs based on features of your industry. Superior products with outstanding performance may help you control the overall situation, while providing you with the best choice for smart scheduling and instructions communicating.

This manual is applicable to
BF-325 series

WARNING!

◆In explosive atmospheres (flammable gas, dust particles, much powder area, etc.), please turn the power off.

Instructions before Use

It's important for the operator to be aware of and understand hazards common to the operation of any radio. Please observe the following safety precautions to prevent radio damage and personal injury. The following precautions shall be observed during operation, service and repair of this radio.

- ◆The recommended usage rate is 1 minute for TX and 4 minutes for RX, when the radio is used in the transmission mode for many hours continuously, the radiator and chassis will become hot, allow the rear panel of the radio to contact a surface of low melting point /low Ignition point.
- ◆Don' t leave the transceiver in direct sunlight for a long time. Also, don' t place the transceiver on sources of extremely heat, damp, dusty area, or unstable surfaces.
- ◆In areas where the use of radio devices is restricted or warned,, please obey the regulation and turn off the transceiver.
- ◆Use of the radio while driving may be against traffic laws in some countries, please check local traffic laws before using the radio while driving.
- ◆If there is any problem with the radio, please turn the radio off immediately. Then contact the local dealer/technician. Do not modify this radio unless instructed by this manual. Refer to a certified technician only for service.
- ◆If secondary development is required, please contact BelFone or the local dealer for technical assistance.
- ◆Please keep the surface of radio clean and dry. To clean the radio, use a damp fabric soaked in mild washing liquid..

Unpacking and Device Inspection

Note: The following instructions regarding unpacking are only for BelFone's distributors, and service agencies or factories authorized by BelFone.

After carefully unpacking the radio, identify the items listed in the table below. If any items are missing or have been damaged during shipment, please contact dealer immediately.

Accessories

Items	Quantity
Antenna	1
Li-ion Battery	1
Charging cable	1
Belt Clip	1
Screws	1
User Manual	1
Warranty Card	1
Certificate	1

Antenna

Li-ion Battery

Belt Clip

Charging cable

Screws

Installation of Accessories

Installing/ Removing the Antenna

Hold the supplied antenna by its base, then screw it into the connector on the top panel of the radio until fasten.

Turn the antenna anti-clockwise to remove it.

Installing/ Removing the Belt Clip

Attach the belt clip using the two supplied 2.5 * 4mm binding screws.

Attaching/Removing the Strap

Thread the hand strap to the loop back of the two-way radio.

Attaching/Removing the Battery

Warning!

- Don't short-circuit the battery, it may get damaged or burst into flame;
- Never attempt to remove the casing from battery, the battery terminals may short circuit;
- Battery is flammable objects, don't throw it into fire or don't use it on dangerous area.

Match the guides of the battery with the corresponding grooves on the upper rear of the radio, then press the battery until a click is heard to lock it in place.

To remove the battery, please turn the power off then press the latch to unlock the battery and pull the battery away from the radio.

Note: Don't attach / remove the battery if the radio turned on.

Battery Information

The new battery hasn't been fully charged before shipped, please charge more than 5 hours at the first use. The maximum battery capacity and performance is achieved after three full charge/discharge cycles. If the battery power runs low, please recharge the battery.

Applicable Battery

To reduce the risk of injury, please only use the battery and charger specified by BelFone, other batteries may burst, causing body injury and property damage.

Battery Tips

1. When charging battery, keep it at a temperature among 5℃ to 40℃. Temperature out of the limit may cause battery leakage or damage.
2. When charging a battery attached to a radio, turn the radio off to ensure a full charge.
3. Do not cut off the power supply or remove the battery when charging a battery.
4. Never charge a battery that is wet, please dry it with soft cloth prior to charge.
5. If the battery is fully charged, the operating time is noticeably shorter than normal performance; it is time to buy a new battery.

To Prolong Battery Life

1. Battery performance will be greatly decreased at a temperature below 0℃, and a spare battery is necessary in cold weather. The battery that couldn't work properly in the cold environment may work under room temperature, so keep it for later usage.
2. The dust on the battery contact may cause battery breakdown, please use a clean dry cloth to wipe it before attaching the battery to the radio.

Battery Storage

1. Please fully charge the battery before keep it for a long time to avoid battery damage due to the over-discharge.
2. Please recharge the battery after several months' storage to avoid battery

capacity reduction due to over-discharge.(NI-MH batteries:3 months, Li-Ion& Li-polymer batteries: 6 months)

3.Please keep the battery in a cool, dry place under room temperature to reduce self-discharge.

Charging the Battery

The charger only specified by BelFone is allowed to use. The charge indicator on the battery indicates the charging progress.

Charge Steps:

- 1.Plug the AC connector of the switching power into the AC outlet socket.
- 2.Plug the charging cable into the USB Type-C interface of the battery.
- 3.Make sure the battery is connected to the charger, and the charging process initiates when the charger indicator glows red.
- 4.Please remove the battery when the charger indicator glows green which means the battery has been fully charged.

Attaching the Speaker /Microphone

Open the accessory port cover, then plug the speaker/MIC or programming cable into the port.

Getting Acquainted

① Power switch/volume adjust keys

Rotate clockwise to power on, after the radio is powered on, rotate clockwise to increased volume, anti-clockwise to decrease the volume. Rotate anti-clockwise fully to power off.

② LED Indicator

When the radio transmitting the LED will glow red, when receiving the LED will glow green.

③ Speaker

④ **UP Key**

⑤ **DOWN Key**

⑥ **Back Key**

⑦ **MIC**

⑧ **FUNC Key**

Press once to enter the function mode.

Press twice to display the battery level.

⑨ **PTT key**

Press and hold down the PTT key then speak into the microphone to transmit.

⑩ **MONI (Monitor) Key**

Press the key to monitor the selected channel.

⑪ **SCAN Key**

Long press the key to enable the scanning function, and long press again to disable the scanning function.

⑫ **MIC-SP-USB Jack**

Connect to optional speaker/MIC and USB programming cable.

⑬ **USB Type-C Interface**

Connect the charging cable for charging.

Basic Operation

LED Screen

Icon	Description
+	Display when the transmitting frequency of the current working channel is higher than the receiving frequency.
-	Display when the transmitting frequency of the current working channel is lower than the receiving frequency.
A	Display when adding scanning to the current working channel.
888.888	Display working frequency, channel number, and other functions.
88	Display various statuses based on the selected function.
R	Display when the reverse frequency function is enabled.
CT	Display when CTCSS is enabled.
DCS	Display when CDCSS is enabled.
▲	Displayed on narrowband channels.
VOX	Displayed when function VOX is enabled.
★	Display the strength of the received signal when receiving and battery level when transmitting.
.....	Display when keyboard is locked.
F	Display when the FUNC key is pressed to enter the function mode.

Turning the power on /off

Rotate the power switch/volume adjusting keys clockwise to power on, the radio displays the battery level (e.g. 3.9u, indicating a battery voltage of 3.9V)
Rotate the power switch/volume adjusting keys anti-clockwise to power off.

Adjusting the Volume

After the radio is powered on, rotate the power switch/volume adjust keys to adjust the volume level. Rotate the knob clockwise to increase the volume, or rotate the knob anti-clockwise to decrease the volume.

Note: Users can hold down the MONI button for background noise and adjust the appropriate volume according to the background noise.

Selecting a Channel

Press the UP or Down key to select the channel or frequency. In channel mode, press the UP key to increase the channel number, and press the Down key to decrease the channel number; In frequency mode, press the UP key to increase the frequency according to the set step frequency, and press the Down key to decrease the frequency.

Selecting the Channel Mode

Press the FUNC key once, the screen will display "F", and then press the "0" key to switch to: channel mode, channel+ frequency mode, custom frequency mode.

Transmitting

1. Make sure the current channel is not occupied by other radio.
2. Press and hold down the PTT key, and then speak into the microphone.
 - Hold the radio about 3 to 4 centimeters away from mouth, speak at normal voice level.
 - Press and hold down the PTT key, LED indicator glows red when transmitting.
3. Release the PTT key to receive, and the LED indicator glows green when a signal is received.

Receiving

When the channel is being called, the LED indicator glows green and the call can be heard.

- If the signal is weak and the radio is set to a higher squelch level, the call will not be received.
- If the channel has set CTCSS/CDCSS signaling, only calls with the same CTCSS/CDCSS signaling can be heard, and other calls will not be heard.

Functions and Operations

Scan

Scan is used to monitor signals on the radio channels. The scanning function can only be enabled when at least 2 channels are programmed on the radio and the " Scan Add " option of the channel is set to "on".

To begin scanning, press and hold the SCAN key for about 2 seconds, the screen displays "SCAN" and the indicator light will flash green. In channel mode, scanning starts from the current channel and increments by channel number "add scan" set to "on", and cycles through the scan. In frequency mode, scanning starts from the current frequency and increments by the set step frequency.

If a signal is scanned, the radio will remain on that channel until the signal disappears. The scan will resume 5 seconds after the signal disappears, unless a new signal is detected within the delay time. Press the PTT key during the scanning process, the radio will pause scanning and return to the channel where the last signal was received for transmission. If no valid signal is received during the scanning period, press the PTT key to return to the channel where the scanning started for transmission.

To stop scanning, press and hold the scanning button for about 2 seconds, the indicator light will no longer flash green, and the radio will return to the channel where it was before scanning.

Monitor

Press and hold the MONI key to monitor weak signals that are difficult to hear during normal operation, or monitor background noise for adjusting the volume level when there is no signal in the channel.

Bandwidth

The radio supports bandwidth setting, which can set each channel interval to wideband (25kHz) or narrowband (12.5kHz)

Note: The bandwidth of the transmitting and receiving channels should be set the same, otherwise the call quality will be affected.

Busy Channel Locking(BCL)

The busy channel locking function is to prevent interference caused by other users transmitting on the current channel. When "None" is set, regardless of channel conditions, pressing PTT can directly transmit. When "carrier" is set, if the current channel is active, pressing the PTT key will result in a voice prompt of " busy channel lockout " and prohibit transmission. When "CTCSS/CDCSS" is set, if the channel receives a signal with the same CTCSS/CDCSS, pressing the PTT key will result in a voice prompt of " busy channel lockout " and prohibit transmission.

Frequency Matching

Simultaneously press the MONI key and scan key, the indicator light will turn red and there will be a voice prompt of "RF ID". The radio will enter the frequency matching mode. At this point, the frequency matching party remains in the transmitting state until the radio indicator light turns green and there is a voice prompt of "success", indicating successful frequency matching. When the red light of the radio automatically turns off and there is a voice prompt of "fail", it indicates that the frequency synchronization has failed. The radio will return to normal working status and users can press the key again to enter the frequency matching function.

Squelch Level

The squelch level is used to adjust the noise threshold of the received signal. The higher the squelch level, the stronger the noise suppression is enabled. When the selected squelch level is too high, weaker signals cannot be heard. When the selected squelch level is too low, the signal will appear in the background noise.

The radio supports setting the squelch level through the FUNC key:

1. Press the FUNC key once, the screen will display "F", then press the "3" key to enter the squelch level setting.
2. Press the UP or Down key to select the squelch level 0-9.
3. Press the FUNC key again to confirm. During the setup process, pressing any key will exit the setup and maintain the original function.

Time-Out-Time(TOT)

The TOT function can prevent the current channel from being occupied by a single user for too long. For busy channels, a shorter time-out-time limit can be set. If the continuous transmission time exceeds the set value, an alarm will sound and transmission will end automatically.

The radio supports setting the TOT through the FUNC key:

1. Press the FUNC key once, the screen will display "F", then press the "2" key to enter the TOT setting.
2. Press the UP or Down key, select the transmission time limit of 15-495S, and select OFF to turn off the TOT function.
3. Press the FUNC key again to confirm. During the setup process, pressing any key will exit the setup and maintain the original function.

VOX

The VOX function allows users to transmit without pressing the PTT key. When this function is activated, the transmission operation can be directly initiated through voice, and once the voice stops, the transmission will automatically end. When the environment is noisy, the VOX level can be adjusted to a higher level. When the environment is quiet, the VOX level can be appropriately lowered. When the VOX switch is set to " with headphones on ", headphones need to be plugged in to initiate transmission through voice. When the voice control switch is set to "Open without headphones", it can directly speak into the microphone of the handheld terminal to initiate transmission.

The radio supports setting the voice control level through the FUNC key:

1. Press the FUNC key once, and the screen will display "F". Then press the "4" key to enter the VOX setting, the screen will display "VOX" and the current VOX level.
2. Press the UP or Down key and select the VOX level 1-9 or OFF.
3. Press the FUNC key again to confirm. During the setup process, pressing any key will exit the setup and maintain the original function.

Battery Saver

The radio will automatically enter the power saving mode when it has no any operation for a period of time, which can extend the battery life.

Low Battery Warning

When powered on, the radio will automatically detect the battery level. When the battery level is low, the LED indicator light flashes red once and an alarm sounds. Please replace or charge the battery in time to avoid affecting normal use, otherwise the radio will power off.

Keypad lock

After the keypad is locked, all keys except PTT, MONI, and power switch/volume adjusting key cannot be operated. Press and hold the "*" key for more than 1 second, the icon " " will appear on the screen, the keypad will be locked. To unlock the keypad, press and hold for more than 1 second, and the " " icon will disappear.

Frequency Reversal

When the frequency reversal function is enabled, the transmitting and receiving frequencies of the channel are exchanged, that is, using the "receiving" frequency for transmitting and the "transmitting" frequency for receiving. CTCSS/CDCSS encoding and decoding will also be exchanged, that is, using "decoded" signals to encode transmitting signals and using "encoded" signals to decode receiving signals.

The radio supports enabling the frequency reversal function through the FUNC key:

1. Press the FUNC key once, and the screen will display "F". Then press the "1" key to turn on the frequency reversal function, and the screen will display "R".
2. Repeat the above operation to turn off the reverse frequency function, and the screen will no longer display "R".

Note: When switching channels (frequencies) or enabling scanning, the frequency reversal function will automatically exit.

Key Tone

The radio supports enabling or disabling key tones through the FUNC key:

1. Press the FUNC key once, the screen will display "F", and then press the "7" key to enter the key tone setting.
2. Press the UP or Down key, and when selecting close, the status bar will display "OF". When selecting open, the status bar will display "ON".
3. Press the FUNC key again to confirm. During the setup process, pressing any key will exit the setup and maintain the original function.

Backlight

The backlight controls both the screen and keyboard lights simultaneously. When set to automatic, the backlight will automatically turn off if no button operation is performed within 5 seconds; When set to on, the backlight will remain on.

The radio supports enabling or disabling the backlight through the FUNC key:

1. Press the FUNC key once, the screen will display "F", then press the "8" key to enter the backlight setting.
2. Press the UP or Down key, and when selecting close, the status bar will display "OF". When selecting open, the status bar will display "ON". When selecting automatic, the status bar will display "A".
3. Press the FUNC key again to confirm. During the setup process, pressing any key will exit the setup and maintain the original function.

Beat Frequency

In frequency mode, the radio supports enabling or disabling the beat frequency function through the FUNC key to avoid some frequency points generating mixed small noise that affects communication:

1. Press the FUNC key once, the screen will display "F", then press the "9" key to enter the beat frequency setting.
2. Press the UP or Down key, and when selecting close, the status bar will display "SF n". When selecting open, the status bar will display "SF y".
3. Press the FUNC key again to confirm. During the setup process, pressing any key will exit the setup and maintain the original function.

Step Value

In frequency mode, the radio supports setting the step value through the FUNC key:

1. Press the FUNC key once, the screen will display "F", and then press # to enter the step value setting. The current step value is displayed on the screen.
2. Press the UP or DOWN key to adjust the step value. The optional step frequency is 5.000, 6.250, 10.000, 12.500, 25.000, 100.000 KHz.
3. Press the FUNC button again to confirm. During the setting process, pressing any key will exit the setting and maintain the original function.

Temporary TX/RX Different Frequency

In frequency mode, the radio supports temporary setting of different frequency channels through the FUNC key:

1. Press the FUNC key once, and the screen will display "F". Then press the "*" key to enter the TX/RX different frequency setting, and the screen will display "±".
2. Press the UP or Down key to adjust the transmitting frequency. When the set transmitting frequency is greater than the receiving frequency, the screen displays "+". When the set transmitting frequency is less than the receiving frequency, the screen displays "-",
3. Press the FUNC key again to confirm. During the setup process, pressing any key will exit the setup and maintain the original function.

Note: After switching channels (frequencies), the radio will resume transmitting and receiving on the same frequency.

Firmware Version

Press the FUNC key once, the screen will display "F", then press the "DOWN" key to check the firmware version.

CTCSS/CDCSS

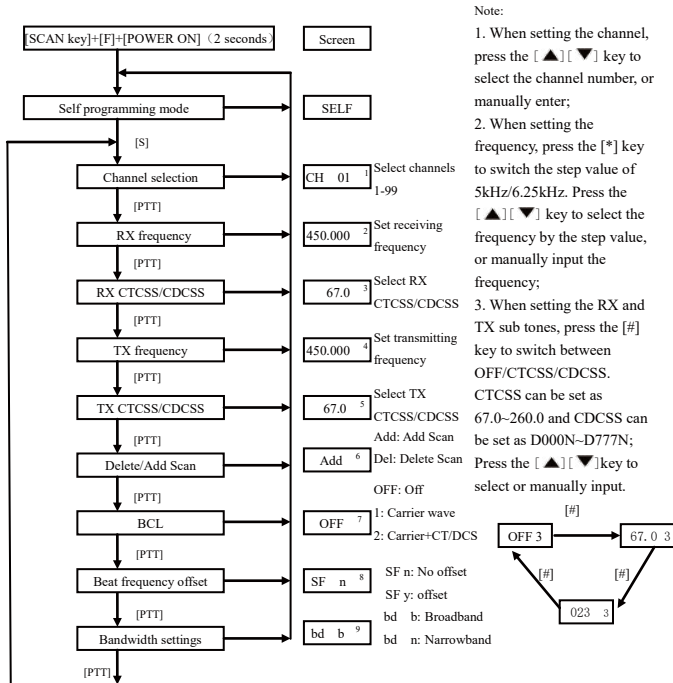

The radio supports CTCSS/CDCSS to guarantee the privacy of the communication. When the CTCSS/CDCSS is set on the channel, voice output is only allowed when the CTCSS/CDCSS transmitted and received match. When the channel is set with CDCSS, the digital sub tone mode can be set as normal signaling or special signaling through the programming software. In normal signaling mode, the encoding rules of digital sub audio adopt universal CTCSS/CDCSS standard rules, while in special signaling mode, the encoding rules adopt special rules. Once the special signaling mode is enabled, please ensure that both the transmitter and receiver enable the special signaling mode, otherwise interoperability cannot be achieved.

Note:

- 1. If there are no special requirements, it is recommended to directly use the normal signaling mode.**
- 2. The radio support non-standard CTCSS/CDCSS, which can be manually input through the programming software, and non-standard CTCSS/CDCSS also support special signaling modes.**

Channel Settings

This radio supports setting channel parameters through SELF mode.

Channel number increased by 1

CTCSS Standard Frequency Table

CTCSS No.	Fre. [Hz]	CTCSS No.	Fre. [Hz]	CTCSS No.	Fre. [Hz]	CTCSS No.	Fre. [Hz]

Specifications

General	
Frequency Range	UHF: 400-480MHz
Channel Capacity	99
Channel Spacing	25 KHz /12.5 KHz
Operating Voltage	DC 3.7V ($\pm 20\%$)
Battery Capacity	1000mAh
Frequency Stability	$\leq \pm 2.5$ ppm
Antenna Impedance	50 Ω
Dimensions (L×W×H)	53.1(L)* 28.7(W)* 100.7(H)mm
Weight	160g(Including Battery)
Transmitter	
RF Output Power	≤ 3 W
4FSK Modulation	11K ϕ F3E/16K ϕ F3E
FM Modulation	$\leq \pm 2.5$ KHz / ± 5.0 KHz
Adjacent Channel Power	60dB
Audio Distortion	< 5%
Receiver	
Sensitivity	≤ -122 dBm (12dB SINAD)
Intermodulation	≥ 60 dB(Wide)/ 55dB (Narrow)
Adjacent Channel Selectivity	≥ 60 dB(Wide)/ 55dB(Narrow)
Spurious Response Rejection	≥ 60 dB(Wide)/ 55dB(Narrow)
Rated Audio Output Power	0.5W
Audio Distortion	$\leq 5\%$
Environmental	
Operating Temperature	-20 C ~ +60 C
Storage Temperature	-30 C ~ +70 C

Statement

This manual is compiled to be accurate and complete for operator's use. For any doubt, please contact Belfone. We will give you professional answers. As radio communication technologies develop rapidly, Belfone reserves the right to change product design and specification without prior notice to consumers.
